

Bait is the cheapest action only after pricing its information value

(A) full range

(B) zoom on PASS $\rightarrow$ BAIT

expected cost (frozen-table units)

- $\mathbb{E}[C(\text{pass})]$
- $\mathbb{E}[C(\text{bait})]$, immediate
- - effective bait $= \mathbb{E}[C(\text{bait})] - V(p)$
- $\mathbb{E}[C(\text{divert})]$
